# Edmonton R User Group

Meetup - October 27, 2022

# Last Thursday of every month, 6-8 pm

We’re an online and in-person R-enthusiast group hosting live speaking events on a range of topics, from data wrangling to visualization and Shiny.

Learn R, hone your skills, network, or just stay up-to-date.
All skill levels are welcome!

# Edmonton is located on Treaty 6 territory

a traditional gathering place for diverse Indigenous peoples whose histories, languages, and cultures continue to influence our community.

# Showcase your work!

Tell us in what interesting ways you use R every day!

We are looking for short (10-15 minutes) presentations demonstrating something interesting or new that you found out about recently.

We'd like to have some representation across fields and organizations: biology, engineering, industry, academia, government, SMBs…

# Bringing Back an R useR Group to Edmonton!

By R Consortium | October 20, 2022 | Blog

The R Consortium recently spoke with Dr. Péter Sólymos, organizer of Edmonton R User Group-Yegrug, Edmonton, Canada, about how his interest in learning R came up, how he currently uses it in his work, and the trends in the language over the next few years. But above all, Péter tells us about the challenges and progress involved in bringing the R community back to Edmonton last year.

Dr. Péter Sólymos is a Senior Data Scientist with a background in biology, environmental science, and computer programming. His work with the creation of end-to-end data analytics, statistics, and ML is focused on streamlining and improving decision-making. He currently facilitates evidence-based decision-making in the public services sector.
